Network Security

Our Cisco CCIE Security consultants can assist at any level of your business needs from Pre-Sales Design, Re-Design, Implementation, Complex Configuration, Operation and Maintenance, Troubleshooting, and Day 2 support. We also provide end – to – end training beginning at the end-user level to assure the prevention of network threats. We believe whole heartedly in the importance of knowledge transfer after the implementation of new services.

Within the Security realm, our engineers come with a wealth of experience and industry recognized certification to include the knowledge and understand to provide solutions for:

Encryption Services

- Transparent Mobility across any Data Center
- Securing your communication infrastructure through Data Security

Trust Based Security

We help to make sure your corporate standards and regulatory compliance is maintained through secure access policies while still providing the availability of borderless communication for your corporate needs. This includes:

- Cisco Protection and Access
- End device Security
- Firewalls
- Intrusion Preventions
- Infrastructure hardening
- Network Access Control
- Wireless Security

Threat Defense

- End Point Security
- Policy Management and Monitoring
- IPsec/SSL VPN Services

Data Loss Prevention

- Unfortunately today there is both the threat within and without. We can help you implement the best practice solutions to protect against intellectual property leakage.
- Payment Card Industry Data Security Standard's (PCI DSS)

And Much More!

When working with Security solutions, we believe in a 5-step process; Plan, Design, Implement, Operate, and Optimize. Platinum Solutions Group can tailor this model to accommodate any customer solution needed.
