## Wireless Solutions

Our Cisco CCIE Wireless consultants can assist at any level of your business needs from Pre-Sales Design, Re-Design, Implementation, Complex Configuration, Operation and Maintenance, Troubleshooting, and Day 2 support. We also provide end – to – end training beginning at the end-user level. We believe whole heartedly in the importance of knowledge transfer after the implementation of new services. Within the Wireless realm, our engineers come with a wealth of experience and industry recognized certification to include the knowledge and understand to provide solutions for:

- Aironet Access Points
- Borderless Networks
- Indoor/Outdoor Wireless Networks
- Securing your wireless networks with 802.1X/NAC Security Components
- Spectrum Analysis
- Wireless IP Telephony
- Wireless LAN Controllers; 6500 WiSM, 2100 Series, 4400 Series, and 5500 Series
- Wireless LAN Management
- Wireless Security Servers

Maintaining complex compliance control while providing the ever growing need for a borderless network communication can be difficult. You have the need to provide network access but still control what access is granted for guests, contractors, customers, clients, devices, remote employees, and internal employees. We help to make sure your corporate standards and regulatory compliance is maintained through secure wireless access policies while still providing the availability of the borderless communication for your companies needs.

### And Much More!

When working with Wireless solutions, we believe in a 5-step process; Plan, Design, Implement, Operate, and Optimize. Platinum Solutions Group can tailor this model to accommodate any customer solution needed.
